

City of New Martinsville
Foundry Street Sanitary Sewer Separation

Project Location: New Martinsville, WV
Engineer: Swiss Valley Associates, Inc.
Estimate: \$1,327,286.85

Project Description:

- The sewer system in the City of New Martinsville was originally constructed as a combined storm / sanitary system with combined sewer overflows (CSO's) which flow during wet weather events. As part of the Long Term Control Plan for eliminating CSO's, new sanitary sewers will be installed in the Foundry Street area, upstream of the Batton lift station. This will eliminate the discharge of three CSO's into Fishing Creek.
- Proposed schedule for the Foundry Street Sanitary Sewer Separation project is to complete Phase I (approximately one-half of the project) in 2011.

Contracts Awarded / Let for Bid:

Foundry Street Sanitary Sewer Separation - Phase 1 Pro Contracting, Inc. Clarksburg, WV
